

## Tirana West (Terminal)

about project

# M10

### Budget

ALL 877.700.000

### Municipal contribution

Partial investor

### Municipal sectors/ directorates

Directorate of  
Transportation Road

### PROJECT DESCRIPTION

Tirana West Terminal is one of the most important infrastructure developments in Tirana. It will contribute to the disciplining of interurban traffic coming into Tirana from the western and northern areas of Albania, thus easing the congestion in one of Tirana's main entrances.

The construction will cover an area of 75,000 m<sup>2</sup> and is located in the north-west part of Tirana. There is already a feasibility study for this development which is currently being updated. The study shows that both the ROE and IRR of the project are very positive thus making it a very interesting proposition for interested investors.

The project has made provision for a train and tram/light-rail station, intercity and international bus stations, taxi and car parking, bars, restaurant, waiting rooms, etc.

### OVERALL OBJECTIVE

Building Tirana West through a partnership with investors or other interested parties in order to complete a key component of the integrated transport system for Tirana.

### PRELIMINARY IMPACT

By offering an alternative terminal for intercity and international busses which currently are obliged to park in central areas of Tirana, Tirana West will discipline traffic and parking in Tirana and help improve mobility in one of the main entrances to the capital. By removing the need for intercity and international buss traffic to enter the streets of Tirana, the terminal will also have a significant impact in reducing air and acoustic pollution in the city.
