

Multi disciplinary community center

about project

S03

Budget

11,500,000

PROJECT DESCRIPTION

Establishing a community center in the territory of the Municipality of Tirana is an important project for the Municipality of Tirana because of the many social issues that concern the communities living in the area. Addressing these issues in a proper and efficient manner demands an interactive approach and the involvement of individuals with social needs in the effort. To date, the Municipality of Tirana suffers from the lack of a serious, modern effort to offer these services to various categories such as youth, women, the elderly and people with special social needs. The community center is conceived as point of reference and a haven that will provide safety, support, integration, and orientation for all individuals that face socio-economic obstacles or experience abuse, negligence or exploitation within the family or beyond.

OVERALL OBJECTIVE

The establishment of a multidisciplinary social services center in order to better address the social needs of the community and improve the quality of the life in the Tirana area. The center will provide information and counseling and will carry out monitoring with the goal of meeting basic needs of communities in terms of feeding, hygiene, education, health and care for the elderly. The mission of the center will extend to building community involvement, empowering families and individuals and offering support on employment and careers to people with different abilities and social needs.
