Reconstruction of Kindergarten nr.34

about project

S14

Budget

ALL 52.912.579

PROJECT DESCRIPTION

The kindergarten is a one floor building with a total area of 1000 square meters, and a built area of 381 square meters. To date, it accommodates 84 children, however the demand has increased steadily over the past years. Besides its limited classroom capacity, the building also suffers from problems of humidity while the lack of central heating means that the necessary conditions for children can only be guaranteed through the use of very expensive and non-efficient means of heating. Furthermore, the kindergarten lacks a playground or a garden.

The reconstruction project includes waterproofing the ceiling, structural works, upgrading of electrical grid, plumbing and drainage as well as outdoor works to provide the kindergarten with a playground. The nursery will be located on the ground floor and will have three classes with living and dining facilities.

OVERALL OBJECTIVE

The project will improve the conditions of the kindergarten classes and facilities thus guaranteeing better care for the children. At the same time, the project will increase the capacity of the kindergarten and be expanded with a nursery thus making it better able to meet the demands of the community. A new heating system will also provide better conditions, as well as save costs through energy efficiency.

PROJECT IMPLEMENTATION MODALITY

The project foresees the following interventions:

- Reconstruction and repair of the building of the kindergarten;
- Redesigning and reorganizing the spaces in order to accommodate a nursery;
- Increase the capacity of attendance for children,
- The creation of recreational areas for children.
- Improvement of facilities for learning of children,
- Increasing the efficiency of energy use, through the installation of the heating system.
